

HIPAA Compliance in Multi-Cloud

Control mapping, evidence collection, and continuous compliance across hybrid and multi-cloud environments.

Situation

A healthcare organization needed consistent safeguards across AWS, Azure, and on-premises systems while maintaining audit-ready evidence and minimizing duplicate work across security and platform teams.

Approach

We aligned controls to a single evidence model, automated recurring checks where feasible, and clarified shared responsibility boundaries so assessments did not stall on ambiguous ownership.

Outcomes

Improved audit cycle time, fewer repeated findings, and clearer remediation ownership.

HIPAA and compliance claims should be validated with legal and clinical governance teams.
